Field notes: vegetation survey

This is an original demonstration document.

Goal: compare plant counts at two sites.

Use the same observation area at each site.

Observations

Site A: 12 plants in the observation area.

Site B: 18 plants in the observation area.

These invented values are examples, not research results.

Interpretation and next steps

The observed difference is six plants.

Repeat observations before drawing a conclusion.

Keep the original source beside your notes.
